

COVID19 in Gloucestershire – weekly data summary Week 36 (reported week 37)

The report is based on week 36 (data between 31st August and 6th September 2020) and where available daily data up to 8th of September 2020.

Gloucestershire Local Outbreak Management
PREVENT-CONTAIN-RESPOND-**MONITOR**

Weekly Covid-19 roundup

COVID19 related deaths' are all deaths where COVID19 features on the death certificate. It is not known to what extent it contributed to an individual's death

Lab-confirmed positive cases are attributed to the day the first specimen was taken from the person being tested (the specimen date). Each day new cases are reported, but the dates they originate from cover the previous few days. Because of this, there are few cases reported for the most recent dates. Data from around 5 days ago can usually be considered complete. Data for recent days are constantly being revised as more information becomes available.

Weekly Covid-19 update for Gloucestershire 31 August - 6 September

46

No. of cases in past week*

How are test numbers measured?

Lab-confirmed positive cases are attributed to the day the first specimen was taken from the person being tested (the specimen date). Each day new cases are reported, but the dates they originate from cover the previous few days. Because of this, there are few cases reported for the most recent dates. Data from around 5 days ago can usually be considered complete. Data for recent days are constantly being revised as more information becomes available.

Mortality

Weekly deaths occurring up to 28th August, compared with the five-year weekly average

Source: ONS and PCMD

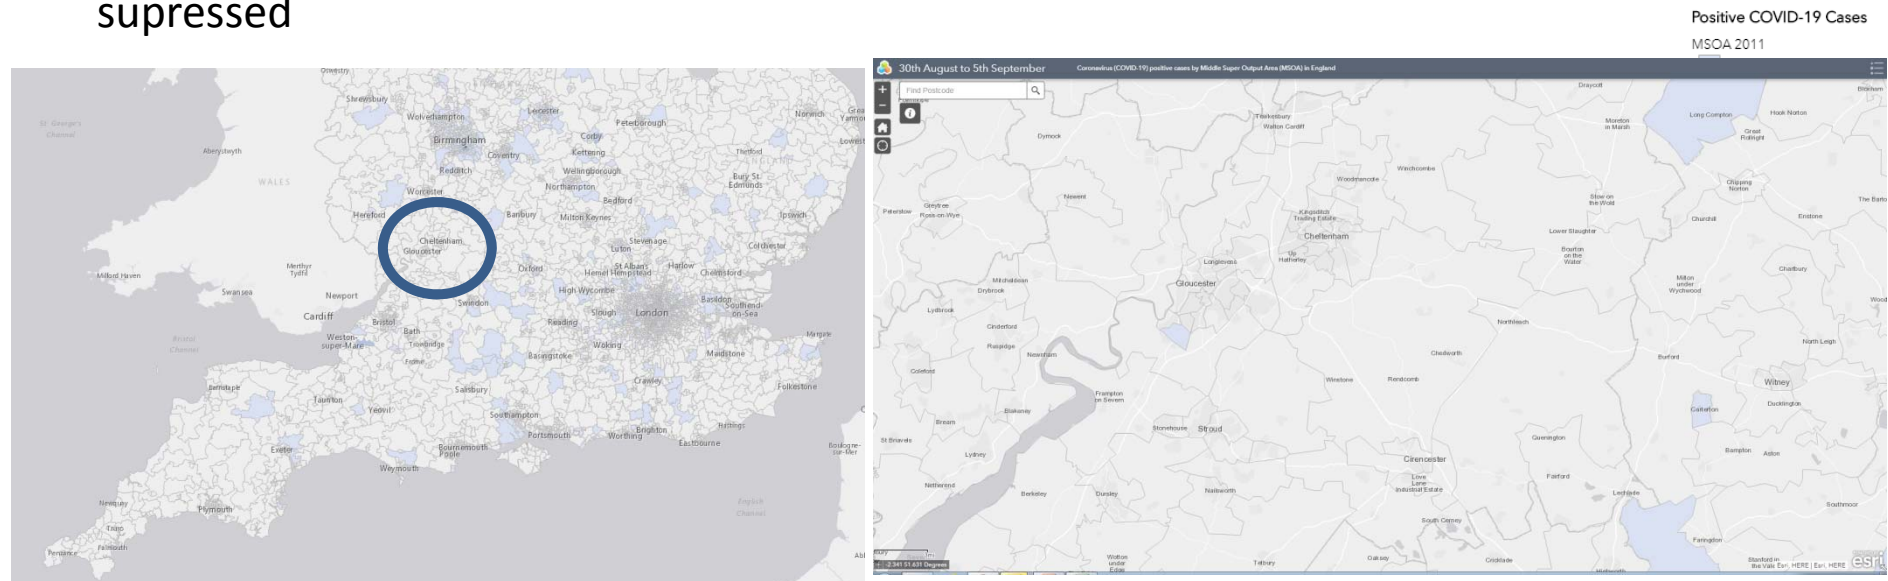

COVID19 deaths are all deaths where COVID19 features on the death certificate. It is not known to what extent it contributed to an individual's death.

Weekly death figures provide provisional counts of the number of deaths registered in England and Wales for which data are available. From 31 March 2020 these figures also show the number of deaths involving coronavirus (COVID-19), based on **any** mention of COVID-19 on the death certificate. The tables include deaths that occurred up to 14th August..

Cases by Lower Tier LA & Medium Super Output Area (MSOA)

- Individual cases are distributed across Gloucestershire.
- MSOAs are a small area statistical geography with an average 8,447 population and average of 3,395 households. There are 75 MSOAs in Gloucestershire
- Between 30th August – 5th September 2020 **one** MSOAs in Gloucestershire had more than three cases (Quedgeley South n=4). Data where there is less than three cases is suppressed

Source: Public Health England Second Generation Surveillance System (SGSS). Data includes lab confirmed pillar 1 & 2 positive cases of Coronavirus (COVID-19) with specimen dates between 30th August – 5th September . Please note MSAO reporting less than 3 cases are suppressed, so only MSAO with more than 3 cases are shown (0 to 2 (inclusive) are suppressed). <https://arcgis.com/apps/webappviewer/index.html?id=47574f7a6e454dc6a42c5f6912ed7076>

R-Value

- Calculations of the **reproduction number, R value*** have been updated by the government on the 28th August.
- R value - the South West R value range is estimated to be between 0.8 and 1.1 (compared to 0.9 and 1.1 last week); true value is somewhere towards the middle of this range.

Region	R
England	0.9-1.0
East of England*	0.8-1.0
London*	0.9-1.1
Midlands	0.8-1.0
North East and Yorkshire	0.8-1.0
North West	0.8-1.0
South East	0.8-1.0
South West*	0.8-1.1

**The uncertainty around R values increase when there are small numbers of cases, either due to lower infection rates or smaller geographical areas. Because of this R-Values are not produced at Local Authority level. Locally we monitor a range of indicators to monitor the threat and impact of COVID19.*

***Low case numbers and/ or a high degree of variability in transmission across the region means these estimates are insufficiently robust to inform policy decisions.*
